

A Complete and Powerful tool for Managing and Auditing Windows Active Directory

Overview

Since, effective management of Windows Active Directory incorporating its objects is imperative for organizations; for making it possible various Active Directory management tools are being used. Some of those tools ease users' management; few facilitate managing computers, servers, and groups while few help querying Active Directory and handling services, events, and jobs. Thus, organizations need to rely on multiple tools to manage Active Directory objects in an impeccable manner.

Now, with the launch of Lepide Active Directory Management and Reporting – an expedient, prolific, and simple Active Directory management software, organizations will have a single tool to manage all Active Directory objects from a central location. Software is specifically tailored for system administrators, who spend lots of time in handling users' accounts, users' accounts password, computers, groups, jobs, etc. and besides that they do not get a pleasing result. The software helps system administrators to manage services, network shares, users' accounts and password, groups, computers, server, users' logon hours, tasks, events, services, devices, users' mailboxes on Exchange Server, and other Active Directory related administrative tasks on all domains from a central location through easy-to-use and self-explaining wizards. Thus, this competent Active Directory management tool saves substantial amount of time for the system administrators.
