```

**Much of the time and money spent on writing source code.**

**Source code – is your knowledge, experience and technologies.**

Are you ready to share this with others for free?

## Analysis and cracking

**Analysis of unprotected program**  
allows it to be modified...

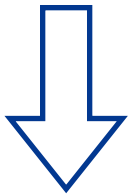

**Modified program** – is not your  
program any more.

Are you ready that your designs may build your  
competitors business?

## What is StarForce Crypto

Professional protection solution for C++,  
.NET executable code and data against:

Analysis

Modification

Hacking

## Advantages and features

- Strong protection of algorithms and data against reverse engineering and cracking
- Maximum compatibility of the protected applications
- Adjustable level of code protection
- Easy protection integration
- Opportunity of enhanced protection level by using other StarForce solutions (binding to optical disc, computer or server)
- External binding is available
- No need any other additional equipment (such as hardware keys) or software to implement protection or to run protected applications
- Protection can be implemented by StarForce engineers

## Unique feature

External binding

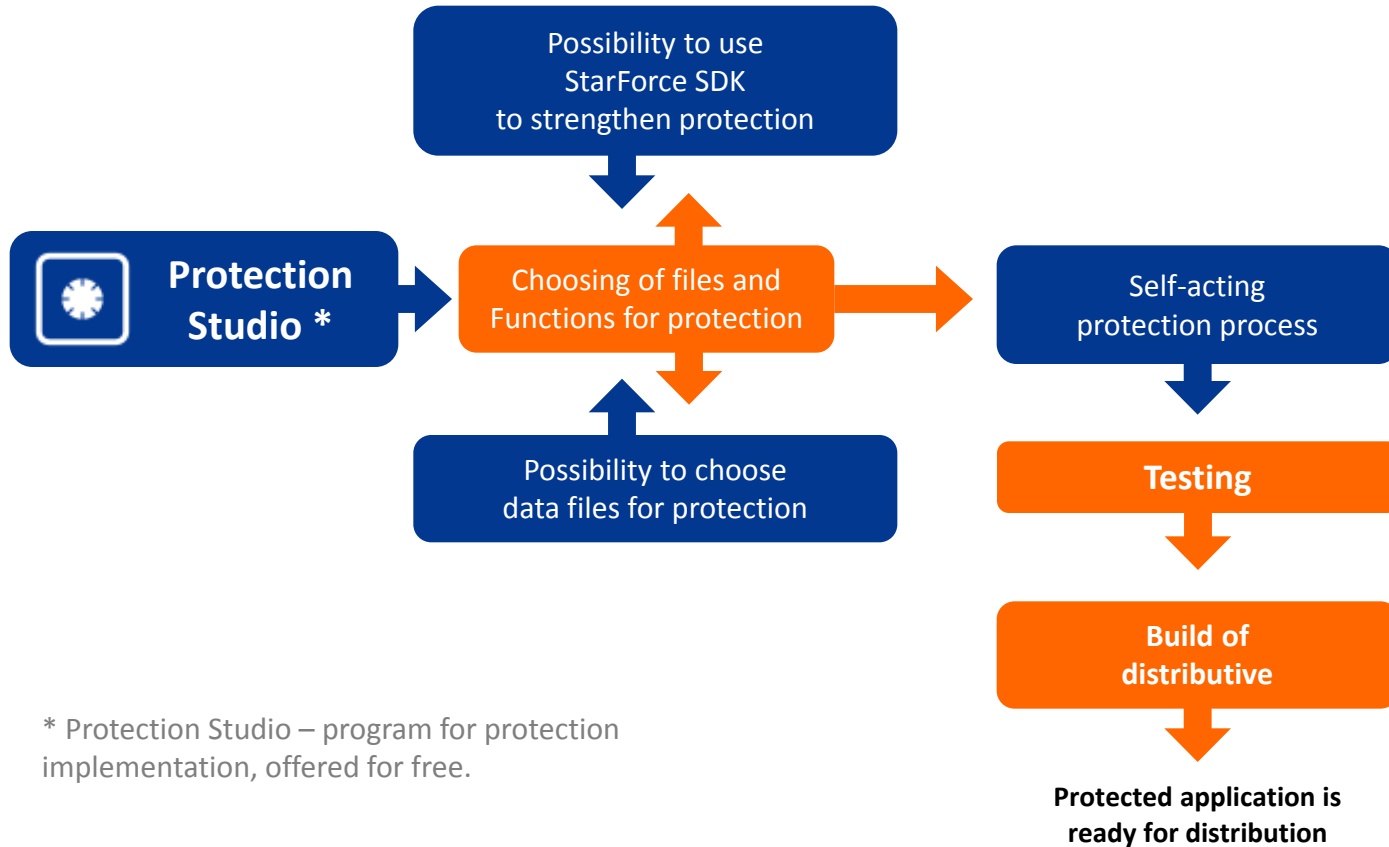

Additional legality check may be set with the app internal verifications for the functions pre-specified for it by the customer (developer).

### Benefits of external binding

- Flexible protection settings
- Integration with the existing licensing systems
- Extra protection from unauthorized distribution

## How it works

\* Protection Studio – program for protection implementation, offered for free.

## Integration effect

To understand program inner structure, how it works, how to modify it or use the part of a code for own advantage, hacker will need...

A lot of time

## Try StarForce
